On Mar 1, 2002 this sequence version replaced gi:10862725.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
                                                                                                                                                                                                                                     one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RP11-258C19 is from the library RPCI-11.1 constructed by the group of Pieter de Jong.
                                                                                                                                                                                                                                                                                             This sequence is the entire insert of clone RP11-258C19 This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

**NOTE: This is a 'working draft' sequence. It currently
consists of 6 contigs. The true order of the pieces
** is not known and their order in this sequence record is
** arbitrary Gaps between the contigs are represented as
** runs of N, but the exact sizes of the gaps are unknown.
** This record will be updated with the finished sequence
** as soon as it is available and the accession number will
** be preserved.
** 1977. Contict of 027 be 100% of 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (27-APR-2000) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA On Jul 11, 2001 this sequency errsion replaced gi:11345005.

All repeats were identified using RepeatMasker:

Smit, A.F.A. & Green, P. (1996-1997)

Sequence 10, Application US/09461474

Patent No. 6278042

GENERAL INFORMATION:
APPLICANT: Allen, Steve
APPLICANT: Rafalski, Antoni
APPLICANT: Sakai, Hajime
TITLE OF INVENTION: Plant Metal Transporters
FILE REFERENCE: BB1303 US NA
CURRENT APPLICATION NUMBER: US/09/461,474

CURRENT FILING DATE: 1999-12-14

EARLIER APPLICATION NUMBER: 60/112,562

EARLIER FILING DATE: 1998-12-16

NUMBER OF SEQ ID NOS: 17

SOFTWARE: Microsoft Office 97

SEQ ID NO 10
